Summary:

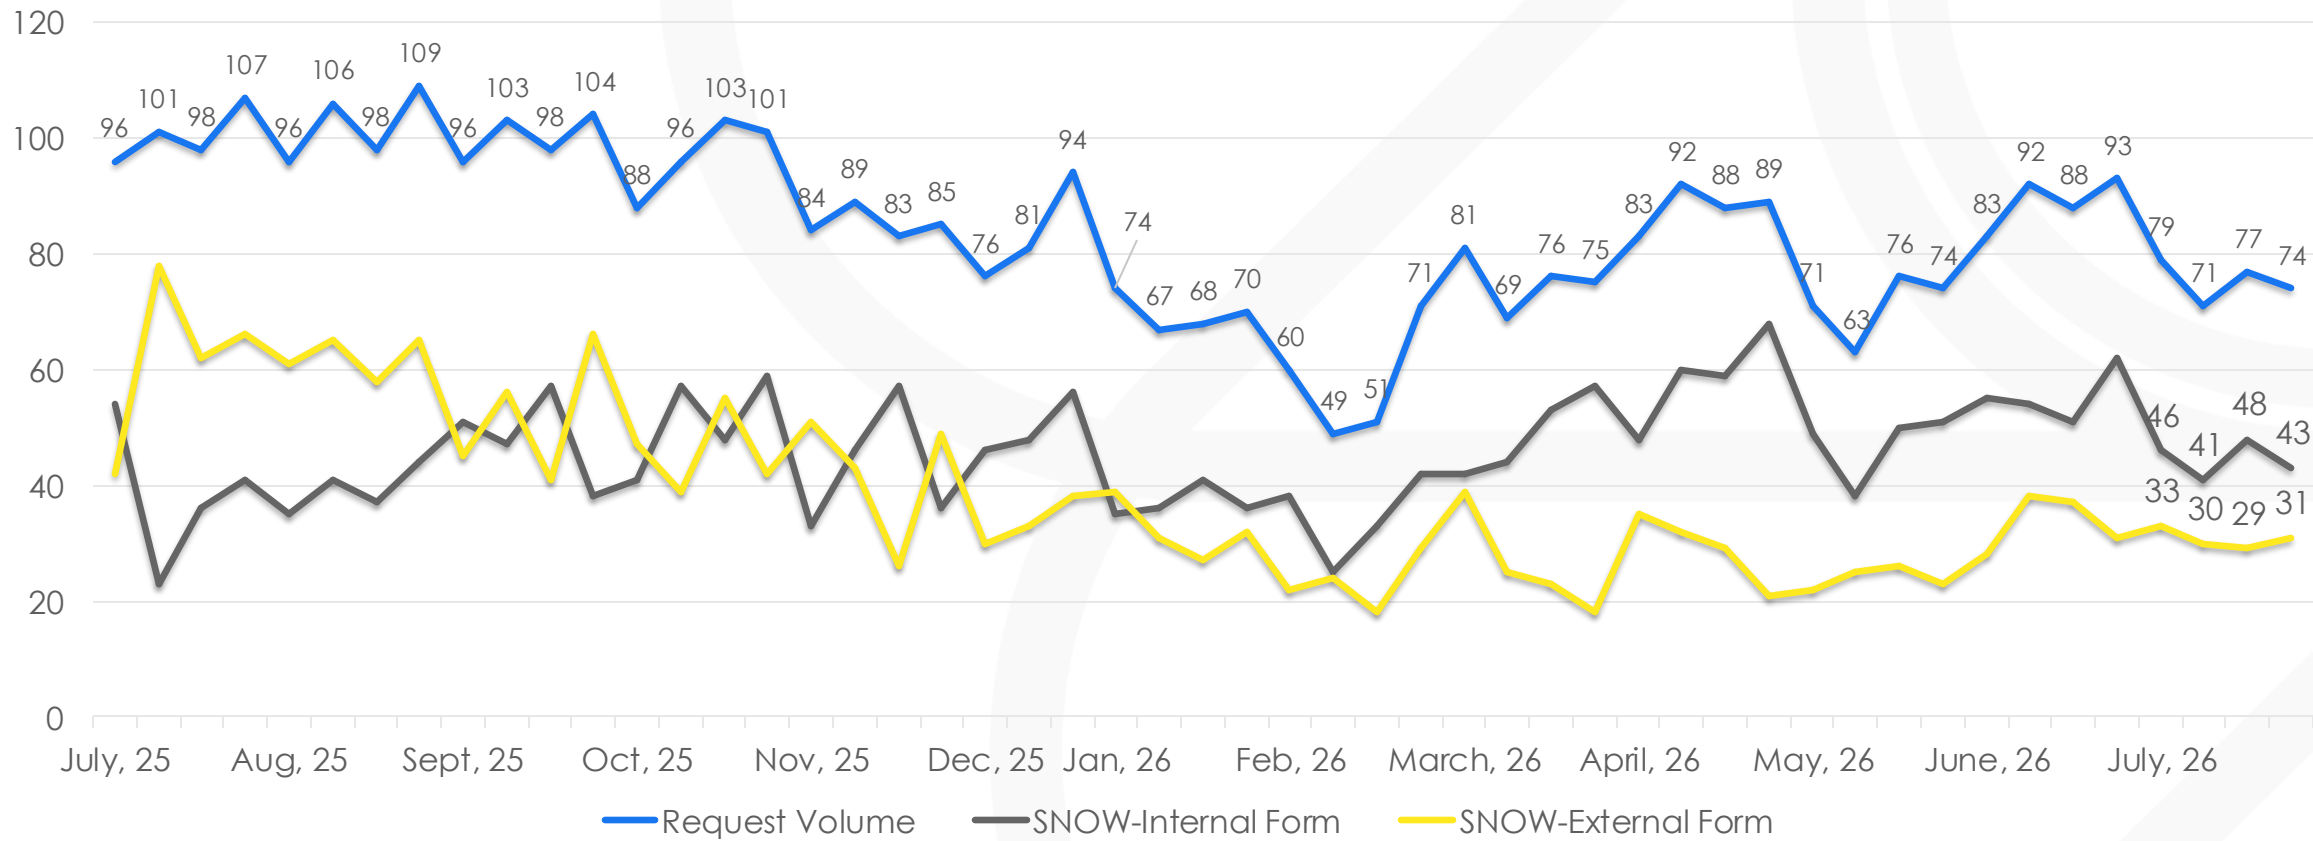

- **301** requests completed across CSO operations in July.
- **Simplified 1Password onboarding:** With the transition to the new Identity & Access Management team, new users now require only one MyHUB form to access CSO vaults, replacing the previous two-step process and manual invitation. The updated process is documented in Helen’s CSO Technology Processes deck.
- Two new accounts were recently created for **J&B Non-Alc India** on Instagram and Facebook

CSO Request Volumes – Last 12 months

- Over the last month, **60%** of requests were received through the internal form, compared to 65% in June.
- CSO has successfully resolved **6300+** tickets on SNOW.

Request SLAs: Month-On-Month Analysis

OBSERVATIONS – July vs. June

- **75%** of requests were completed **within 1 hour in July**, vs. 74% in June.
- **Native Access requests** were completed **10 minutes faster** compared to June, driven by quicker request validation and more streamlined access-sharing process.
- **Other request** handling time improved by **1 hour 15 minutes**, despite a higher request volume, driven by faster turnaround on connecting Instagram-Facebook pages natively and DM related requests.
- **Sprinklr reconnection requests** were completed **1 hour faster** driven by fewer platform-related issues on CSO's end.
- **Updating account bio** took **20 minutes longer**, primarily due to incomplete information in some requests, requiring follow-ups with requestors regarding link reordering and adding event links.

Note: Average SLA's have been calculated using a median-based approach to remove extreme outliers.
